ABOUT ME

I am a software engineer focused on building reliable and secure production systems.
I enjoy working on complex problem-solving and turning requirements into stable, maintainable solutions. I have experience contributing across the full development lifecycle, from design to deployment. I value clean architecture, system reliability, and continuous improvement.
I'm motivated to grow in challenging environments and deliver software that creates real impact,

EDUCATION

Bachelor of Engineering (B.E.) ECE

Electronics And Communication Engineering

Erode Sengunthar Engineering College
(Anna University)

2019-2023

WORK EXPERIENCE

AaptteknoUS 2024 - 2026(Febraury)

Software Engineer

- Designed and developed a complete agent provisioning and installation system from scratch, currently in pre-production testing and stabilization.
- Built secure credential handling workflows from the ground up, preventing plaintext secrets using OS-level encryption and strict startup validation.
- Implemented fail-closed safety checks to block service startup when configuration or security requirements are not met.
- Developed automated service installation and lifecycle management from scratch, including dependency ordering, startup control, and recovery handling.
- Integrated certificate-based authentication and encrypted communication for secure system-to-system interactions.
- Actively debugging, hardening, and resolving deployment-time issues to prepare the system for a reliable production rollout.

SKILLS

- Rust & Python for backend services and system agents
- SQLite integration and secure local data storage
- OS-level encryption and secure credential handling
- Installer & provisioning automation (Windows)
- Service orchestration & lifecycle management
